

Makoto Hiramatsu

Software Engineer / AI & NLP

Tokyo, Japan ■ himkt@klis.tsukuba.ac.jp

himkt.github.io ■ github.com/himkt ■ linkedin.com/in/himkt

Software engineer working on AI for science, with a background in natural language processing and large-scale web applications. Optuna committer and author of Konoha and cafleet.

Professional Experience

Preferred Networks, Inc.

Feb 2022 – Present

Software Engineer

Tokyo, Japan

- Develop software for Matlantis, a neural network-based atomistic simulation platform for materials discovery.

Cookpad, Inc.

Apr 2019 – Jan 2022

Software Engineer / Researcher

Tokyo, Japan

- Developed NLP applications for a large-scale recipe service, including named entity recognition, corpus construction, and recommendation.
- Developed large-scale Ruby on Rails applications.

Contract Experience

BlancAI, Inc.

June 2024 – Present

Software Engineer

Tokyo, Japan

- Develop Blucor, an AI-powered recruitment solution that automates candidate screening.

Preferred Networks, Inc.

Jun 2019 – Jan 2022

Open-Source Developer

Tokyo, Japan

- Contributed to Chainer and Optuna, open-source frameworks for deep learning and hyperparameter optimization.

ELYZA, Inc.

Aug 2021 – Nov 2021

Software Engineer

Tokyo, Japan

- Prototyped applications using machine learning and natural language processing.

Ubie, Inc.

May 2021 – Nov 2021

Software Engineer

Tokyo, Japan

- Prototyped applications using machine learning and natural language processing.

Education

University of Tsukuba

Apr 2017 – Mar 2019

Master of Informatics ■ GPA: 3.98 / 4.3

Named Entity Recognition

University of Tsukuba

Apr 2013 – Mar 2017

B.E. in Library and Information Science ■ GPA: 3.5 / 4.3

Ontology extraction

Featured Open Source Development

Optuna [Committer](#) Automatic hyperparameter optimization for machine learning.

CAFleet [Author](#) Multi-agent orchestration for Claude Code, Codex, and OpenCode.

Hydra [Contributor](#) Added Optuna v4/v5 support and NSGA-III sampler configuration to the Optuna Sweeper plugin.

Konoha [Author](#) Japanese tokenizer wrapper, adopted by Flair for Japanese support.

mise [Contributor](#) Added Homebrew package path lookup and fixed upgrades for self-updating casks.

Technical Skills

Languages Python, Ruby, Rust, C++, Java, SQL

Frameworks & libraries Ruby on Rails, PyTorch, Optuna, AllenNLP, Flair

Certification AWS Certified Solutions Architect – Associate
